

# Advanced - Logs Settings

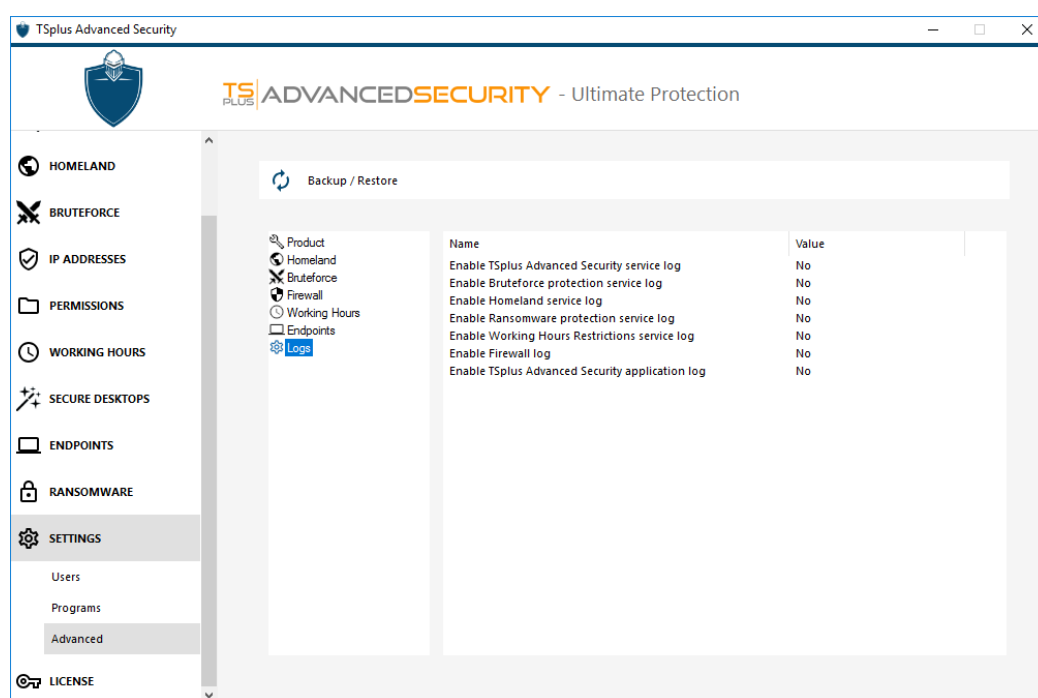

The **Logs tab** allows you to *enable or disable service and functionalities logs*. Logs exist to find more easily the origin of the errors encountered on TSplus Advanced Security.

To retrieve the logs, open an Explorer and head here:

**C:\Program Files (x86)\RDS-Tools\RDS-Knight\logs**

or

**C:\Program Files (x86)\TSplus-Security\logs**

Enable or disable *TSplus Advanced Security service and application logs*, which are respectively the global configuration service that runs in the background and the log for the Application interface.

You can also enable logs corresponding to the respective TSplus Advanced Security features :

- Bruteforce Protection
- Homeland
- Ransomware protection
- Working Hours
- Firewall

They are disabled by default.

Logs correspond to different components, our support team will tell you what value to put according to the problem encountered.
