

Product Overview

What is TSplus Remote Support?

TSplus Remote Support enables screen sharing and remote control for your support team so they can provide instant remote assistance to your teams or clients anywhere. With Remote Support, agents and maintenance teams can provide instant attended or unattended access to remote Windows PCs. TSplus Remote Support is a solution for IT professionals to deliver internal maintenance and for customer support teams to assist remote clients.

How does it work?

Security and Servers

TSplus Remote Support enables Windows Desktop Session Sharing. It uses end-to-end encrypted connections for both support agents and end-users. Connections are facilitated by the TSplus Remote Support relay servers and require no installation for agents or end-users.

TSplus Remote Support relay servers are distributed all around the globe to ensure the better performance and experience. Relay servers are maintained directly by the TSplus development team.

Every Remote Support connection is secured using modern **TLS encryption**.

With this protocol in place on Remote Support, you can make session sharing with Remote Support with peace of mind.

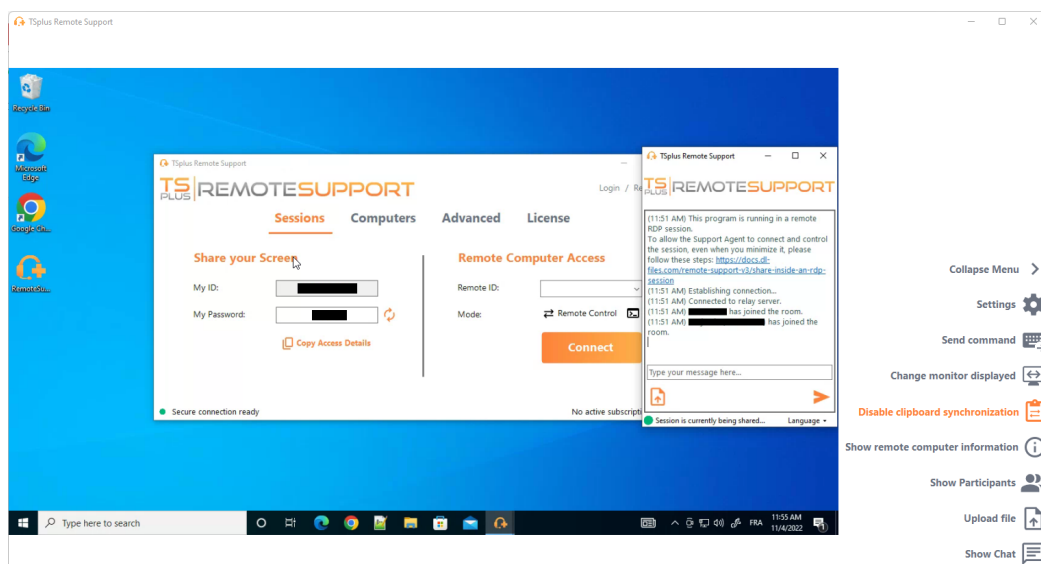

Two Access Modes Available

Two access modes are available:

- "Remote Control" allows you to take control of the remote session using your mouse and keyboard, while displaying the screen of the distant session.
- "Command Line" allows you to display a command prompt in the context of the remote session.*

* "Command Line" mode is only available if the remote computer have enabled unattended access.
