

Web Portal Preferences

Using the Web Portal Design and the Web portal Preferences, you will be able to create your own customized HTML Web Access pages - and there is *no need to be a web developer!*

The screenshot shows a 'Preferences' dialog box with a title bar containing a minus sign and a close button. The dialog is divided into several sections:

- Default Values:** Contains three text input fields for 'Login:', 'Password:', and 'Domain:'. Below these are two checkboxes: 'Show the Domain field' (unchecked) and 'Remember last login' (checked). A third checkbox, 'Hide server selection list', is checked.
- Advanced:** Contains a 'Keyboard:' label and a text input field containing 'as_browser'.
- Upload:** Labeled 'Folder to select files.', it has four radio button options: 'User Desktop (default)' (selected), 'My Documents', 'WebFile folder', and 'Custom folder:'. The 'Custom folder' option has a text input field and a 'Select...' button. Below the options is a descriptive text: 'Folder path from where the user will select files to be uploaded.'
- Download:** Labeled 'Folder for all received files', it has the same four radio button options as the Upload section, with 'User Desktop (default)' selected. It also has a 'Custom folder' option with a text input field and a 'Select...' button. Below the options is a descriptive text: 'Folder where all downloaded files will be stored on the Server.'
- General Note:** A line of text states: 'Downloaded files from the users PC will be stored in the specified folder. (Drag/Drop from the user PC, Download button or File Transfer button)'.
- File Selection:** Two radio button options: 'Use Explorer to select files' (selected) and 'Use TSplus-RemoteWork GUI' (unchecked).
- Buttons:** At the bottom are three buttons: 'Reset' (with a circular arrow icon), 'Preview' (with a magnifying glass icon), and 'Save' (with a globe and arrow icon).

This tile allows you to configure the Web Access page:

- **"Default Values"**: you can specify a default login, password and domain that will auto-populate the login fields. All of the settings present here are saved in the index.html file, which can be copied and renamed to your preference.
- **"Show the Domain Field"**: when checked, the Domain field is included in the login information request.
- **"Keyboard"**: only for advanced administrators who have special keyboard requirements.
- **"Upload - Download"**: choose source and destination paths for file uploads and downloads.

Generating the HTML Web Access page

We advise you to try a "Preview" before generating a new HTML Web Access page.

Once you are pleased by the preview, then you can click on the "Publish" button to generate and publish the page to your web server's root folder.

You will be asked for a page name. If you want to overwrite your default page, use "index". In this case, the newly published web page will be accessible at: <http://your-server.com/index.html>
