

Web Applications Portal: Parameters in URL address

If you want to bypass Terminal Service Plus standard logon Web Access page when using the [Web Applications Portal](#) and go directly to the Web Applications Portal page, you must specify several parameters in the URL address:

- user login
- user password
- user domain
- server
- port
- client type (HTML5 or Windows)

Here is an example of a full URL address for user "demo" with password "demo" on our demo server with an HTML5 client:

The domain, server, port and type parameters being optional, the following URL address has exactly the same behavior:

https://demo.tsplus.net/index_applications.html?user=demo&pwd=demo

To use a Windows client, use:

```
&type=remoteaccess
```

Using those parameters in the URL address, you can go directly to the Web Applications Portal page.

You do not have to specify all these parameters at the same time: the parameters not specified will have their default configured value.

If you wish to bypass Terminal Service Plus standard logon when using theconnect with the HTML5 client, check [this page](#).
