# HTML5 Client: Parameters in URL address

When using Terminal Service Plus HTML5 client to connect to a remote server, you can specify several parameters in the URL address to override default parameters, such as:

- user login
- user password
- program to run
- startup directory for the program to run
- command line for the program to run

## Run a Specific Application

Here is an example of a full URL address to open a remote session for user "demo" with password "demo" and by starting standard notepad upon session opening:

Please note that in the URL address all slashes characters must be repeated **4 times**.

You do not have to specify all these parameters at the same time: the parameters not specified will have their default configured value.

# Connect with Web Credentials

If you want to use a Web Credential to connect, you can pass it in an URL by adding an "@" before the Web Login.

Here is an example of a URL address to open a remote session with the Applications Panel for Web Credentials "1234" with password "demo":

https://demo.tsplus.net/software/html5.html?user=@1234&pwd=demo

# Restrict this usage to Users Default Applications

You can disable the Application Command Line for users by going on the **Advanced --> Session tab** of the AdminTool, double-clicking on the "Application Command Line" setting and setting the value to "No".
