Creating and Customizing HTML Web Access pages using the Web Portal Preferences and the Web Portal Design

Using the Web Portal Design and the Web portal Preferences, you will be able to create your own customized HTML Web Access pages - and there is *no need to be a web developer*!

Web Portal Design

With the Web Portal Design tab, you will be able to customize all the display and graphic settings, as well as add your own logo. You have the choice between a collection of 20 photos, or you can add your own. You can also set any color theme with the background color of your choice or you can use one of the classic themes.

Page		Header	
Theme:	Photo	Baseline:	pple and Systems Through Internet Size: 13
Photo:	Coffee V Choose	Background color:	#0A8AB1 Ea Choose

Usemame:	User name:		
Password:	Password:		
Domain:	Domain:		
2-Step Verification:	2-step verification:		
Log-on Button:	Log on	- (?) Help	Reset Reset Save

Some advanced tips:

- You don't have to click on a "Choose..." button if you already know a color code: just type it in the input.
- Be careful with the real size of the pictures: your page could be quite bad-looking if a picture is too big.
- Do not hesitate to use the "Preview" button on the bottom, it's fast and easy!

Web Access	× +		
< 🕙 127.0.0.1/preview.html	C Q	☆ 自	» ≡

Saving typed values and Resetting to default ones

When you close this window, all the values you typed and checked are saved.

If you want to reset these values to values by default, click on the "Reset" button on the bottom.

This tile allows you to configure the Web Access page:

- "**Default Values**": you can specify a default login, password and domain that will auto-populate the login fields. All of the settings present here are saved in the index.html file, which can be copied and renamed to your preference.
- "Show the Domain Field": when checked, the Domain field is included in the login information request.
- "Keyboard": only for advanced administrators who have special keyboard requirements.
- "Available Clients": choose between 2 types of web connection clients. If both are checked, the user will have the choice.
- "Gateway Portal": check it to activate a Gateway Portal enabled page. This feature adds an extra authentication step when you assign a server to a user or group. (More information on the Gateway feature can be found here).

• "Upload - Download": choose source and destination paths for file uploads and downloads.

Since TSplus version 14.60, the section "Windows Password" has been added.

From this section, you can now add an alert message showing during the connection through the web portal, to inform the user about his password expiring date. For example, the following pop-up will show if the user's windows password expires in less than 3 days:

	Perset your Windows password
Expiration password reminder Your windows password expires in 2 days. Would you like to change it now?	×

As mentioned it gives him the possibility to change it directly from the Web Portal using the pop-up displayed just below:

		Reset your Windows password
	x Reset your Windows password	
	Your username - Ex: CORPgohndoe	
	Your old password	
A CARLES AND A CARLES	Your new password	A Star of the Star Day of the Star of the
	Confirm your new password	an hair saine bereit an ann aine an a St. an anna a State ann an ann
A REAL PROPERTY OF A REAL PROPER	Validate	

You can also directly make the user able to change his windows at any time, by enabling the button "Reset your Windows password" through the Web Portal preferences.

TS REMOTEACCESS

Web Credentials

The "Web Credentials" section allows you to enable (or disable) the Web Credentials feature.

When using Web Credentials, you might want to allow empty passwords. If you only have Web Credentials with empty passwords, we recommend that you uncheck the "Show Password Field" option, in order to simplify even more the web login page.

Generating the HTML Web Access page

We advise you to try a "Preview" before generating a new HTML Web Access page.

Once you are pleased by the preview, then you can click on the "Publish" button to generate and publish the page to your web server's root folder.

You will be asked for a page name. If you want to overwrite your default page, use "index". In this case, the newly published web page will be accessible at: http://your-server.com/index.html
